

Bug Reports — AcademyBugs.com

Exploratory Testing (Part 2 of 2)

Project: AcademyBugs.com — Exploratory Bug Hunt (Functional, Visual, Content, Performance, Crash)

Tester: Azeem Mohamed Husain

Environment: Chrome (latest), Desktop

Date: July 2026

This is Part 2 of 2 — covering Functional, Performance, and Crash Bugs, plus the Summary Table. See Part 1 for Content and Visual Bugs.

Functional Bugs

● FUNCTIONAL-01: Social Share Icons Non-Functional

Category: Functional

Severity: Low-Medium

Description: On the product detail page, social share icons (Facebook, Twitter/X, Email, Pinterest, LinkedIn, MySpace) appear visually grayed out/disabled. Clicking the Twitter/X icon produces no action.

Steps to Reproduce:

1. Navigate to any product detail page
2. Click the Twitter/X share icon

Expected Result: Clicking should open a share dialog or new tab for sharing the product on Twitter/X.

Actual Result: No response to the click.

Evidence:

![Screenshot: functional-bug01_twitter-button.png](evidence/functional-bug01_twitter-button.png)

FUNCTIONAL-02: "Manufacturer" Link Leads to Incorrect/Inappropriate Page

Category: Functional

Severity: Medium

Description: On the product detail page, clicking the "Manufacturer: Handmade" link navigates to a page that does not match the expected manufacturer information context.

Steps to Reproduce:

1. Navigate to a product detail page
2. Click the "Handmade" manufacturer link

Expected Result: Should navigate to a relevant manufacturer information or filtered product page.

Actual Result: Navigates to an unrelated/inappropriate page.

Evidence:

![Screenshot: functional-bug02_giving_inappropriate_page.png](evidence/functional-bug02_giving_inappropriate_page.png)

FUNCTIONAL-03: Grand Total Calculation Error in Shopping Cart

Category: Functional

Severity: High

Description: On the Shopping Cart page, the Grand Total does not match the sum of Cart Subtotal and Shipping.

Steps to Reproduce:

1. Add multiple items to cart
2. Navigate to the Shopping Cart page
3. Observe the Cart Totals section (Subtotal, Shipping, Grand Total)

Expected Result: Grand Total = Cart Subtotal + Shipping = \$559.80 + \$7.99 = **\$567.79**

Actual Result: Grand Total displayed as **\$667.79** — a \$100.00 discrepancy from the correct calculated value.

Evidence:

![Screenshot: functional-bug03_total_balance.png](evidence/functional-bug03_total_balance.png)

Note: This is a high-severity, verifiable calculation defect — confirmed independently by recalculating the displayed Subtotal and Shipping values, not just a visual impression.

● FUNCTIONAL-04: Price Range Filter Does Not Apply

Category: Functional

Severity: Medium

Description: Selecting a price range filter (e.g., \$100.00–\$299.99) on the product listing page does not actually filter the displayed products, despite the filter tag appearing as active.

Steps to Reproduce:

1. Navigate to the Shop/product listing page
2. Apply a price range filter (e.g., \$100–\$299.99)
3. Observe the product list and the filter tag

Expected Result: Product list should update to show only items within the selected price range.

Actual Result: Filter tag shows as applied (with a "(1)" count indicator), but the product list does not actually filter — filter has no effect on displayed results.

Evidence:

![Screenshot: functional_bug04_price_range_function.png](evidence/functional_bug04_price_range_function.png)

Performance Bugs

PERFORMANCE-01: Delay/Unresponsiveness on MySpace Icon Click

Category: Performance

Severity: Low

Description: Clicking the MySpace share icon on the product detail page triggers a noticeable delay/unresponsiveness before any further action can be taken on the page.

Steps to Reproduce:

1. Navigate to any product detail page
2. Click the MySpace share icon
3. Observe page responsiveness immediately afterward

Evidence:

![Screenshot: performance-bug01_when_click_myspace_icon.png](evidence/performance-bug01_when_click_myspace_icon.png)

PERFORMANCE-02: Billing Address Section Stuck Loading

Category: Performance

Severity: Medium

Description: On the Account page, the Billing Address section displays a persistent loading spinner and does not resolve to show the actual billing address content within a reasonable time.

Steps to Reproduce:

1. Log in to an account
2. Navigate to Account > Billing Address section
3. Observe the loading state

Expected Result: Billing address details should load and display within a few seconds.

Actual Result: Loading spinner persists indefinitely (or for an unreasonably long duration) without resolving.

Evidence:

![Screenshot: performance-bug02_billing_address_loading.png](evidence/performance-bug02_billing_address_loading.png)

Crash Bugs

● CRASH-01: Currency Selector Triggers Site Instability

Category: Crash

Severity: High

Description: Interacting with the currency selector (e.g., switching to GBP) triggered the site's crash-detection state, temporarily restricting page access.

Steps to Reproduce:

1. Navigate to any page with the currency selector
2. Change currency (e.g., to GBP)

Actual Result: Site flagged a crash event; page access was restricted for approximately 5 seconds before becoming usable again.

Evidence:

![Screenshot: crash-bug01_search-button.png](evidence/crash-bug01_search-button.png)

● CRASH-02: "Retrieve Password" Button Triggers Site Instability

Category: Crash

Severity: High

Description: Clicking "Retrieve Password" on the password recovery form triggered the site's crash-detection state.

Steps to Reproduce:

1. Navigate to the Forgot Password page
2. Enter a valid email
3. Click "Retrieve Password"

Actual Result: Site flagged a crash event; page was inaccessible for approximately 5 seconds before recovering.

Evidence:

![Screenshot: crash-bug02_forget_password.png](evidence/crash-bug02_forget_password.png)

CRASH-03: "Post Comment" Button Triggers Site Instability

Category: Crash

Severity: High

Description: Submitting a comment via the "Post Comment" button on a blog/product comment form triggered the site's crash-detection state.

Steps to Reproduce:

1. Fill out the comment form (name, email, website, message)
2. Click "Post Comment"

Actual Result: Site flagged a crash event; page was inaccessible for approximately 5 seconds before recovering.

Evidence:

![Screenshot: crash-bug04_post_button.png](evidence/crash-bug04_post_button.png)

Note: All three crash bugs share the same observed pattern — a brief (~5 second) full-page lockout immediately after the triggering action, before normal access resumes. This consistent pattern across three different triggers suggests a shared underlying mechanism (e.g., a simulated server error/timeout) rather than three unrelated defects.

Summary Table

CATEGORY	BUGS DOCUMENTED	OFFICIALLY REGISTERED (PER SITE TRACKER)
FUNCTIONAL	4	4
VISUAL	4	3
CONTENT	5	3
PERFORMANCE	2	3*
CRASH	3	4*
TOTAL	18	17

*Small discrepancies between documented findings and the tracker's per-category counts are expected — the tracker doesn't always register a submission on the first attempt (a known limitation encountered during this session), and category boundaries for a couple of borderline findings (e.g., loading-related issues) could reasonably sit under either Visual or Performance.
